

# Personal Summary

Explanation - leads me to where I am today, plans & strategy to help as many people as I can.

1971, age 16 - ALS, 1976, age 21 - pancreatic cancer after graduation architectural engineer, 1980 - went to med school to be a transplant surgeon, taught Chemistry lab while there. 1997 Nutritional Physical Biochemistry. 1999 - Created National Cancer Research Foundation, 2012 - Naturopathic Doctorate - Board member-Institute Alternative Medicine & Cancer Research

In 1976, at age 21, I had “Functional Hyperplasic Islet Cell Carcinoma”, given 3-6 month maximum survival expectancy with surgery, 3 weeks without surgery. They did not know why I had it in the first place. I never touched alcohol, cigarettes, drugs, not even coffee. Let’s go back to how it started. I call it “Reverse engineering”

**Always Remember:** If you cannot “define” the problem, how can you apply a resolution to something you cannot define?

## **My train of thought:**

Define the problem,  
break it down to smallest detail,  
derive the best strategy to resolve the problem,  
apply this strategy  
resolve the problem.

I was always a very active kid, had a newspaper “NEWSDAY” Route - 62 papers, got numerous awards from NEWSDAY for my hard work. I also cut many lawns in the neighborhood, landscaping of all types, put in brick patios, wooden decks, finished basements, painted houses, light carpentry, part of the “Audio Visual” dept in high school. With my own money, I got my own boat when I was 14, refurbished it on my own, bought & sold 3 cars before I got my license, very active in many ways. There was no dust on my shoes.

**Dec 4, 1971**, age 16, 11<sup>th</sup> grade, I woke up paralyzed on my left side, unable to speak on my right side. I had no previous symptoms. After testing, 4 different hospitals diagnosed it as “Lou Gehrig’s Disease” (ALS). Devastated, I spent 40% of the time in the hospital, walked with a cane with great difficulty and pain, I was tutored at home because of my debilitating condition. I was told that there was no cure and would die from it.

During the 50% of the time when I was able to go to school, I went to class periods 1,3,5 and 7 one day and 2,4,6 and 8 the next because it took me an entire period to walk to the next class with the cane, and in pain, but I did it. I was not allowed to go to second level classes after I collapsed and fell down the flight of stairs, they found me unconscious at the bottom. They did not know why I had this problem in the first place. I never touched alcohol, cigarettes, drugs, not even coffee.

Over time, it progressed, became more severe, symptoms included: extreme chest pains, like 1,000 Charlie Horses(severe muscle spasms), resulting from sugar being extracted from the muscles to replenish the circulatory system’s low sugar supply, slurred speech, mental confusion, disorientation, lack of energy, glassy eyes, Miocene Gravis, spinal meningitis, manic depression, 12<sup>th</sup> rib syndrome, sacroiliac degeneration. There were times where I felt fine, as though I never had a problem. Some doctors thought I was into drugs or drank too much alcohol, testing confirmed I never touched any alcohol/drug/cigarette in my entire life, not even coffee, I blew their theories out the window, scratching their heads on that one.

Normal blood sugar ranges between 80-120, low sugar is hypoglycemia, when down to 60. When sugar levels go down to 30 they usually go into a coma, at 10 - usually dead. My blood glucose levels were documented at “6” on 8 different occasions.

Just after I managed to graduate with my degree in architecture, sheer determination, I collapsed again, hospital bound for a long period, I don't need to tell you of the pain, you already know, I bent the stainless steel bedrails. In Sept 1976, after 34 incorrect diagnoses, the 7<sup>th</sup> arteriogram test revealed islet cell tumors, I was then diagnosed with **pancreatic cancer** “functional hyperplastic islet cell carcinoma”, given 3 weeks to live without surgery, 3 - 6 months max with surgery. Because of my age and clean habits, it did not make sense, except that my father's maternal side all died from diabetes related illnesses, my mother's side had gastric cancers. I later connected it to DES.

My comas became so severe that I had the surgery on October 26, 1976, surgery included removal of 90% pancreas, total spleen, partial stomach. Pathology confirmed extensive pancreatic cancer. I refused all chemo/radiation treatments. I was given 4 - 6 months after that.

They said cancer was an outside invader, but if that was true, why did the immune system remain neutral and not go after the cancer. I then researched all the minerals in my body to determine which were low and why it was happening. I have researched this subject intensely, determined the deficient minerals, took huge volumes, achieved good results after 2 years when tests showed - “No evidence of Cancer”.

I focused on my grandfather and his identical twin, which they have identical DNA, which is simply a processing system based on electromagnetism between amino acids in their specific arrangements. My grandfather was a horrible alcoholic, in Psych ward at age 56, died of 9 cancers at age 65, 1961. Micky did not drink any alcohol ate what they grew, raised and ate their own cattle, plenty of good quality milk, eggs, vegetables, home-made pastries, etc. He lived to 104 and only died from antibiotic overdose, somebody gave him pneumonia. Therefore, it was evident that function and expression is relative to the proportions of specific minerals causing different reactions based on those proportions.

I spent the next 30 years studying all the minerals in the body to determine their accurate functions and their proportions to each other to cause the correct electromagnetic relationships to each other to cause specific reactions to take place and to prevent others from taking place.

I returned to study medicine in 1980, to become a transplant surgeon, including 4 years of transplantation research, preservation and surgical techniques on Kidney, Heart, Lung and Pancreas. During this time, I also taught Chemistry lab 1980 - 1985. I researched the bio-mechanics of the pancreas /endocrinology system, which revealed current cancer research to be inaccurate. American medicine treats the symptom rather than the source. If I need another pancreas, no known technique existed to transplant the pancreas at that time, I worked on that.

I chose transplantation because a transplanted organ is not made by the body, the immune system will attack it as an outside invader, and we need to provide immune suppressors to prevent this attack. I wanted to understand the mechanisms of immune attack and to see why it would attack a transplanted organ and not cancer, as they believe cancer is an outside invader. I believed it was made by the body by error, I wanted to prove that and show the root cause to support my theory and to show why the “outside invader” theory is wrong.

On 2/26/93, I was severely injured when the World Trade Center was bombed, with fractures and extensive internal injuries. It took many years to recover and be able to start walking again, which I still have difficulty today, I deal with it. During this very lengthy timeframe of recuperation, I was able to help many people, and continued my extensive research while in bed, studied Nutritional Physical Biochemistry at NYIT in 1997, which helped me to explain my theories better. The “Primary Discussion” is the thesis from that.

My sister Diana had been hospitalized 15 times during the summer of 1997, and diagnosed with pancreatic cancer Sept 12, 1997. We then realized the connection. After our mom had 4 miscarriages between 1948 – 1950, she had to stay in bed from the moment she was pregnant with our sister Rosemary. 1952 - when she carried Diana, they gave her DES to prevent miscarriages, she also took DES while carrying me In 1955.

When she carried Barbara in 1957, DES was outlawed, so, she did not take DES while carrying Barbara in 1957 and Valerie in 1960. Upon researching DES, we found strong links to cancer. Mom was given DES while carrying Diana and I, we both had the same type cancer.

I completed my doctorate to be a **Naturopathic Practitioner**.

I am a Board member of the **Institute of Alternative Medicine & Cancer Research** .

Based on the relative links between pH, calcium, parathyroid function and cancer initiation, the body’s biochemistry is a simple “domino effect” of “action causes reaction”. To properly treat cancer, the effective treatment must affect the domino affect from the beginning, which will cause the rest of the reactions to follow suit instead of coming in at the middle of the domino run. The Parathyroid is relative to calcium metabolism, linked to the body’s pH. Proving this link, parathyroid treatment may be of value towards effective cancer treatment. My sister and I both had parathyroid problems in our younger years, doctors were not concerned. It’s important to examine calcium and pH levels as well as parathyroid function. Less than 10% of cancer patients had thyroid exams.

The body is a simple machine of “action causes reaction”. We as a society make it complicated by adding strange un-natural items to the body, called medicine, altering the body’s natural biochemistry instead of looking at its simplicity and sticking to the basics of natural chemistry.

My research implies that cancer initiation does not involve the blood stream at all, does not spread in a seed-like manner as currently implied. Instead, it is generated via the autonomic nervous system (ANS) and pH environment, relative to nutritional deficiency. Current testing techniques, including radiation, will not detect cancer until cancer replication is so great that the immunities developed to fight it appear in the tests. Blood tests only reveal symptomatic results, not the actual cause, current medical practices treat symptoms instead of the source. Until the source is corrected, it will continue to produce continued results, current treatments will only redirect the path it takes because it never addressed the root source of the cause.

The cause is the result of the nutritional deficiency altering the environmental source, which, upon re-establishing the correct nutritional levels in the body, the environment would be corrected for normal body functions and no longer be provisional to the cancer’s survival, the cancer will soon die as a result. Due to genetics, each person has different vulnerabilities to different deficiencies, therefore, genetics will determine the type of cancer vulnerability. A note of interest, to this day, I never saw a person who had both cancer and multiple sclerosis, MS responds favorably to this same program, so I am interested to see whether MS is part of the genetic vulnerability as cancer is, as well as other ailments. Many non-cancer illnesses respond to this treatment as well.

With age, our ability to metabolize calcium (Ca<sup>++</sup>) diminishes, relative to an unstable pH. Ca is required for cellular respiration involving different electrical charges, and attraction/repulsion. A specific electronic atmosphere generated by the ANS is required for the reaction, essential for proper DNA replication, Krebb's cycle. The 7.4 pH factor provides proper atmosphere and environment. When acidic, +/- reactions will be hindered or too rapid. Low Ca concentration at the respiration sites triggers a biofeedback to cause calcium to be extracted from bone tissue replaced into the bloodstream to satisfy respiration requirements, resulting in osteoporosis. A higher proportion of women with osteoporosis have breast cancer, men with prostate cancer by the same deficiencies leading to those domino effects to those results.

Improper electronic fields infer incorrect DNA replication, deriving a mutated cell. The incorrect replication continues, flourishing because of the acidic environment, while the proper cells hinder due to faltered respiration while not at their electronic potential, unable to compete with the mutated cell. I believe cancer is not a virus or an outside invader, instead, our body creates the event as a biochemical response, which is why we can reverse it.

Calcium and pH seem to be major components for the proper function of the autonomic nervous system. When the myelin sheath is weakened, the voltage change affects the ganglion sites. Each person is different as to which ganglion "hub" would be vulnerable, the electronic atmosphere is altered at the cellular respiration sites, resulting in altered respiration and genetic replication. Specific ganglions provide the route to affect specific body parts, and pain level, as nerve sensory trunks are prevalent in some ganglion routes and not in others.

My research suggests that gastric cancer is derived from the celiac ganglion "hub", affecting digestive organs, mesenteric ganglion affects the kidney/ bladder; these same ganglions affect the location of a person's disc deterioration; Gastric cancer vulnerability reflects T5 -12. L1, 2 & 3 by the next ganglion; L4 & 5 by the tail end of the Superior Cervical ganglion.

Radiation treatments, photonic applications, attempt to decompose the atomic structure of the mutated atom, via alkaline environment, the mutated cell cannot survive, therefore dies, similar to applying lye to bacteria. Photons break the bonds of surrounding compounds such as calcium, through diffraction, chelates calcium, which becomes non-effective, is dismissed out the body via kidney. High radiation exposure can relate to bone & teeth problems, hair turning prematurely white, high doses of calcium prior to treatment result in a lesser negative affect.

It appears that the source (ANS) is not being positively affected by the conventional treatments, whereby, Antibodies, Radiation, and Chemo attack the symptoms, not the source. With source properly treated, the domino effect corrects itself, tumor will diminish. Raising pH to 7.4 or a little higher, calcium up to at least 9.7 - 10.0 , destroys the ability for cancer to survive, it shrinks, afterwhich the body will function at it's normal potential, restored like a reverse domino affect. However, a high calcium level does not indicate proper calcium metabolism, as it can be ineffective and rendered useless due to nutritional deficiencies causing hindered metabolism, and therefore circulates in a useless fashion and yet it is assumed useful because it indicates its presence.

My sister was declared psychosomatic for 10 years for her pain until an endoscopy revealed a malignant tumor in 1997. I explained the route it took over the years, the route it was going to take, and told them how it to treat it, her doctors were not interested.

Instead, they gave her radiation and chemo at the same time. The path it took was exactly as per my prediction, much to their surprise. Neither blood nor barium tests revealed anything until stage 4, which then was too late, those tests only act as markers at that point.

The preliminary tests should ONLY investigate the autonomic system at first, which is capable of indication at earlier stages. ANS testing is more accurate, probably cheaper and less discomfoting than all the other tests, most importantly, is more accurate like no other test.

Genetic therapy - basically an electron voltage regulation within the DNA structure, relative to the different ladderistic levels. A composed inter-electrical relationship is maintained. Duplication is derived by the electronic field introducing similar ionic fields to accompany the replication, resulting in a replication. Compounds derived from altered electronic atmosphere and component availability will generate a similar but not correct compound that will be accepted by the electrical relationship, the effect is a mutated gene with similar but not accurate description.

Blocking vessel growth - is impossible when you think about it. Mechanically, the electronic atmosphere required for the necessary chemical reactions to cause proper cellular respiration is altered or diminished, causing the cells to die as a result of cellular starvation.

A nearby thunderstorm causes tingling effects within our body, electronic surge similar to the electron environment within our body to initiate chemical reactions. ANS is the comparable source to the electrical storm. External influences directly affect our genetically determined vulnerability, and our chance of being affected. I strongly believe that the non-insulated high tension wires have a high potential of altering our natural electronic environment. Society believes that if one cannot see the movement of an object, it therefore does not exist. The photonic effect is very strong. Cancer related illness resolution can be simple & cost effective.

Alcohol, caffeine, and nicotine strip the calcium out of the body as chelating agents, inducing an acidic pH, promoting the environment to initiate cancer. Also, smoke damages biological tissue, which affects the pH and immune system, as does the alcohol and caffeine. Alcohol is a huge contributor towards increasing acidity. The black tea does not cause negative effects, it influences a higher calcium metabolism. Genetic factors determine which areas are vulnerable to calcium weakness. Mental attitude is important, stress will encourage a high acid pH, calmness and tranquility will encourage alkalinity, a stressed out person drinking coffee, smoking, and drinking alcohol, will be most prone to a cancer vulnerability. Those who never abused themselves with cigarettes, alcohol, or drugs will have better chance of fighting or reversing the cancer, as their bodies will be more responsive to treatment because their tissues and organs are in their best functioning condition.

While discussing Diana's earlier locations, she said that the doctors notated that T-5, 6, 7 showed degeneration, but T-1-4 showed good density and no problem. There was no cancer evident in T-1-4, but was evident in T- 5 through 9, which are related to the celiac plexus. T-1-4 are related to a different hub and were provided proper communication and nutrition, therefore maintained good density.

The program has shown great results by initiating the balance needed to maintain the proper levels of functional calcium, pH levels, endocrine system, triglycerides and cholesterol, etc. The pH levels are indicators and will automatically rise when the other conditions are correct.

By adding substances designed only to raise the pH without the proper balance or proportion to each other causes a false indication and false function, with either a short term or no effect. Particular herbs and compound need to be broken down, they may be good, but do not necessarily provide to create the balanced proportions. Too much Vitamin E will thin blood only when proportions are not correct. Correct proportions, even high volume - no toxic level. Toxic only reflects "out of proportion".

In addition, we have learned that providing the minerals in the correct proportions provides the body the ability to correct the domino effect reactions and chemistries that were conveniently caused diseases. By correcting these proportions, the functional restorations take place and problems resolve. Hormonal functions correct their communication, causing corrected functions, such as cardiac, diabetes numbers correct themselves, thyroid and various glands, a long list. Downs syndrome usually is directly related to the mother usually being older with reduce mineral metabolism, upon providing the corrected mineral proportions, the development corrects itself. Other examples are: Multiple Sclerosis, Parkinson's, Graves, Lymes, Lupus, Hepatitis "C", Epstein Barre, Guillian Barre, diabetes, glaucoma, hypertension, asthma, various allergies, ADHD, manic depression, we have also seen the protein synthesis in addicts be corrected in drug/ alcohol/ tobacco addiction, no longer interested in the drug/alcohol after 2 weeks, even if it is directly in front of them.

My focus is "**Action Causes Reaction**" reaction is solely based on the material provided to cause the domino effect reactions. Changing the primary material will alter the domino effects to cause a different result. Society treats the result instead of correcting the initial reaction.

By correcting the initial material, the domino effect corrects itself, causing the correct result.

Environmental factors cause the initial responses to change the domino effects, whether it is temperature, change of foods, radioactive (like Chernobyl accident) poor diet, toxic treatments, toxic lifestyle. These alter the body's electromagnetism, changing the domino effect reactions, changing DNA instructions to cause the body to manufactures cells and chemistries differently.

This explains "Mutation" a mutation is simply a change in how the DNA instructs the body to make a cell, 10% of the mutations are actually improvements, and 90% are negative and harmful. The 10% are what we call "Evolution" which species will adapt to their changed environment by the environmental changes causing their DNA to change instructions. The animals with that mutation will survive that environment because it is more suited to that environment and will thrive better. As time continues, of the many mutations, the mutations which improve the living compatibility to the environment will survive. The term "Survival of the fittest" reflects that.

There are many mutations from various environmental changes which constantly occur resulting from nutritional/ environmental/ emotional conditions. These changes will cause DNA changes. The changes which are negative range from what society call "Illness" like sinus conditions, diabetes, diverticulitis, colitis, PMS, infertility, cardiac problems, cancers.

These are the results of mutations. Instead of toxic applications, simply correct the atmosphere which caused the body to produce it. Then the "incorrectly made cell" can no longer survive in the corrected environment and will die from its own starvation.

Society does not seem to understand that cancer and non-cancer conditions are results from incorrect biochemistry, not outside invaders. Upon correcting the biochemistry, domino effects are corrected, results are corrected.

The body is a simple machine of "**Action causes Reaction**" totally dependent of what you supply it to cause the initiating "**Action**" to "**Cause**" the "**Reaction**"

Dr. Fred V. Eichhorn, ND

President - National Cancer Research Foundation
